HALEY MAES

DATA ANALYST

Arvada, CO · (720) 467-3584 · haleymykellemaes@gmail.com · LinkedIn · GitHub · haleymykellemaes-beep.github.io

PROFILE

Data analyst with an investigator's eye. I find patterns in complex data and translate them into decisions. I build financial models and dashboards that surface insights from messy operational data. I'm relentless about accuracy, comfortable with ambiguity, and driven to understand not just what the numbers say, but why. I'll write SQL or Python when the question demands it, but I *excel* at Excel when that's the right tool. I work well independently and love collaborating across teams to turn data into action.

TECHNICAL SKILLS

SQL · Python · Excel (XLOOKUP, pivot tables, conditional formatting, financial modeling) · Tableau · Power BI · Visualization · Financial reporting & reconciliation · Process automation · Google Sheets · Google Workspace · Cursor · Claude

EXPERIENCE

Financial Operations Analyst Denver Family Dental · Denver, CO — Jun 2024 – Present

- Posted collections $388,273 → $442,912 (+14%). 90+ share of open A/R moved from 31.4% toward 14%.
- Built the Excel A/R huddle (insurance vs patient aging, denial reason, follow-up queue) so the morning works the 90-day pile first — not a dashboard nobody opens.
- Ran vendor cost analysis across supply categories; negotiated with top vendors and cut overhead where the numbers held.
- Tied wait times, scheduling, and staff notes to process changes that lifted the practice Google rating by nearly 1 point.

Assistant Head of School promoted from Lead Teacher · Guidepost Montessori · Dallas, TX — Jul 2023 – Jun 2024

- Reconciled tuition billing for 100+ families; coded variable charges and tracked payment compliance across systems.
- Wrote data-entry standards so administrative records stayed consistent instead of living in three versions of the truth.

Guest Experience Lead RNR Hospitality Group · Scottsdale, AZ — Aug 2022 – Jun 2023

- Owned daily cash reconciliation and shift-level reporting; tracked variance and flagged discrepancies the same day.
- Watched inventory and vendor performance to tighten ordering and reduce waste.

PROJECTS

Python · Happiness and GDP Wrangling & EDA

- Melted World Bank GDP from wide years to country–year, mapped World Bank names to the Happiness Report, inner-joined, and dropped unusable pairs — 1,927 clean rows.
- pandas / numpy: `melt`, `merge`, `np.log`, `corr`, `qcut`, `groupby`, `pivot_table`. Correlation of life evaluation with log GDP per capita is 0.836.

SQL · Late returns pipeline PostgreSQL reporting

- Built a clerk call list and manager store × category scorecard (On Time / Late / Still Out) plus a nightly reload pattern.

Tableau · Nike channel & inventory analog FY2025 10-K

- Segmented Nike FY2025 revenue (−10%) vs flat inventory by channel and franchise from public filings. Direct −13% vs wholesale −7%; Jordan −16% CN. Call: clear Jordan/digital depth, hold wholesale — analog only, not an employer.

EDUCATION

B.S., Data Analytics — Western Governors University, online — 2026

Computational Mathematical Sciences — Arizona State University
